# Disclaimer

- The web server is intentionally developed to be vulnerable, and most not be accessible from the Internet, the following guidelines are recommended for safe use:
  - Run your machine behind NAT (Network Address Translation) to ensure the machine is not directly accessible from the network
  - Disconnect the machine from the Internet when running, in the case of a Virtual Machine it is recommended to configure it to a Host-Only network adapter
  - If installed on your host machine, stop Abyss WS and SQL server when you are not actively testing and using the software
